

# Can't quite put your finger on your greatest security risks?

**We can.**

## **Desktop Security Audits**

SWA's Desktop Security Audits addresses the need for an affordable yet comprehensive security assessment.

Security Administrators realize they have an obligation to their company, the employees, customers, and to the community to provide the safest, most secure environment possible -- and in an affordable manner.

Our Desktop Security Audits review components that are critical to a successful school security management program including:

- A comprehensive review of your security management programs
- A review of Safety Committee or other committee minutes that address security issues
- The design/engineering features of your security technology
- A review of parking and access control plans

We also conduct phone interviews with administrators, support staff and others. Upon completion you will receive a confidential report with our findings and recommendations.
